

Correcting an oversaturated image with Adobe Photoshop

This guide shows you how to correct an oversaturated image, using the example image below.

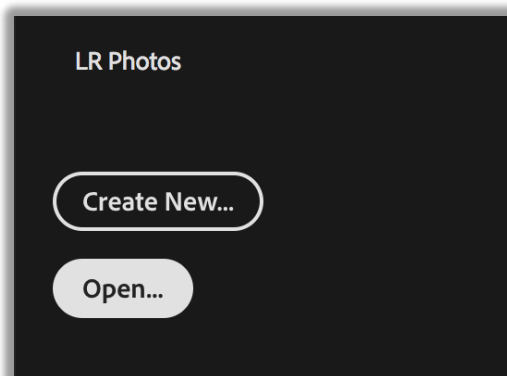

The image could be enhanced by correcting the following issues:

- The left side of the face is a similar tone to the background
- The overall appearance of the image is pale/bleached
- The left eye is faded out

The guide will enhance the image by using the following tools:

- Brightness/Contrast
- Hue/Saturation
- Lasso tool
- Blur tool

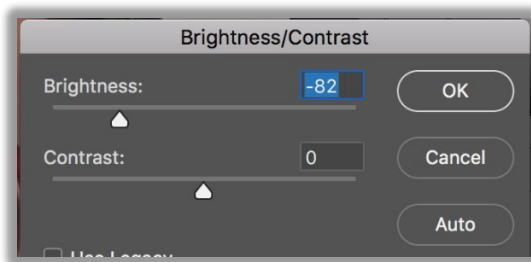

1. Open your image in Photoshop

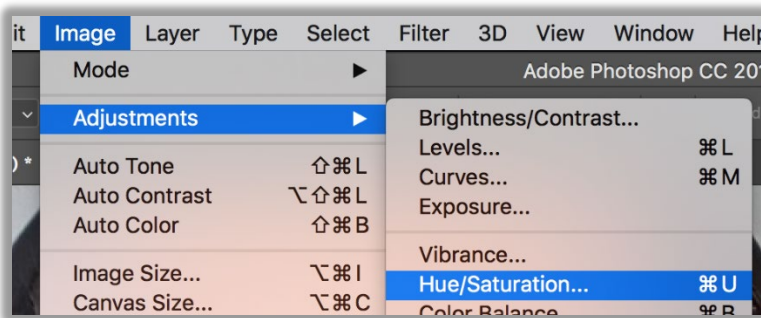

2. Select **Image > Adjustments > Brightness/Contrast**

3. Use the sliders to decrease the levels of **Brightness and Contrast > OK**

4. Hue and Saturation can be used to make tones look neutral or warmer. Select **Image > Adjustments > Hue/Saturation** and use the sliders.

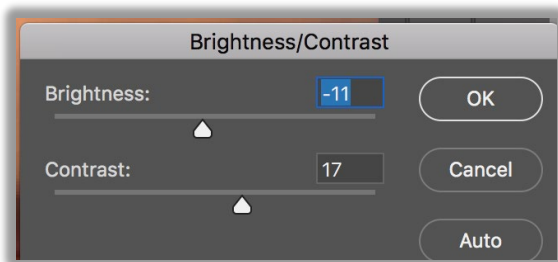

5. The Lasso tool can be used to select specific areas of an image.

6. Draw around the object that you need to adjust.

7. Select **Image > Adjustments > Brightness/Contrast**.
Use the sliders to adjust.

8. Use the **Blur tool** to blend the object into its surroundings

9. Adjust the size and softness of the Blur tool

10. Click around the edge of your object to blend with its surroundings.
