

ISO 14001 Scope v3, June 2020

Scope

The scope covers all areas of the university – this includes all operations, plant rooms and equipment managed directly by the University Estates Department. The scope covers the aspects of energy, waste, waste, sustainable procurement, travel, construction and refurbishment, emissions and discharges and biodiversity.

The scope of this certification excludes facilities not owned or controlled by UAL, for example College activities related to learning, teaching and research – this is covered by a separate ISO 14001 certification. Halls of Residences not owned by UAL are not included.

The locations included cover all academic buildings the University occupies and all the Halls of Residences the University owns.
